Projects

SemanticModels.jl
Georgia Tech Research Institute.
- Research funded by the Defense Advanced Research Projects Agency (DARPA)
- A category theory approach to defining metamodeling tasks for representing and composing scientific models
- A system for extracting semantic information from scientific code and reconciling it with conceptual descriptions to build a knowledge graph

Petri.jl
Software Development.
- A stochastic petri net modeling framework for the Julia programming language
- Allow petri nets to be compiled to Gillespie and differential equation based simulations

VirtualEnv.jl
Software Development.
- Self-contained virtual environments for the Julia programming language
- A reimplementation of `venv` from Python in Julia

Corsair Database
Georgia Tech Research Institute.
- Research funded by the Office of Naval Research (ONR)
- Developed a web application for viewing and analyzing sonar SAS data using Go, Python, and PostgresDB deployed with Docker and Drone.io
- Engineered a database for managing scientific experiments to utilize the speed and efficiency of using a rigid relational database, while being flexible enough to handle the changing data requirements of scientific experimentation
