PROJECTS

AlgebraicJulia

Georgia Tech Research Institute.

- A GitHub Organization for a collection of Julia packages for defining modeling frameworks as generalized algebraic theories
- Includes Julia packages such as Catlab.jl, AlgebraicPetri.jl, and AlgebraicRelations.jl
- A category theory approach to defining metamodeling tasks for representing, composing, selecting, and tuning scientific models
- Research funded by the Defense Advanced Research Projects Agency (DARPA)

Petri.jl

Software Development.

- A stochastic petri net modeling framework for the Julia programming language
- Allow petri nets to be compiled to Gillespie and differential equation based simulations

VirtualEnv.jl

Software Development.

- Self-contained virtual environments for the Julia programming language
- A reimplement of `venv` from Python in Julia

Corsair Database

Georgia Tech Research Institute.

- Research funded by the Office of Naval Research (ONR)
- Developed a web application for viewing and analyzing sonar SAS data using Go, Python, and PostgresDB deployed with Docker and Drone.io
- Engineered a database for managing scientific experiments to utilize the speed and efficiency of using a rigid relational database, while being flexible enough to handle the changing data requirements of scientific experimentation
