MAY 2016 – AUG 2017	**The Boeing Company – Software Development Intern** *Kent, WA.* - Developed a security auditing tool suite for Red Hat Enterprise Linux 7 to maintain hardened security on classified servers - Developed a web application in C#, HTML, and JavaScript to view and analyze network traffic - Developed several system administration scripts as needed by team members to complete tasks such as emailing system logs and automatic server backups - Organized and led a software development team to create a minimum viable product of a Kanban board web application - Pitched the Kanban board prototype to management to form a team to continue development of the application after I left - Documented and executed an upgrade plan for the company's identity management servers - Developed an Outlook-integrated conference room mapping tool in C#

PROJECTS

AlgebraicJulia
Georgia Tech Research Institute.

- A GitHub Organization for a collection of Julia packages for defining modeling frameworks as generalized algebraic theories
- Includes Julia packages such as Catlab.jl and AlgebraicPetri.jl
- A category theory approach to defining metamodeling tasks for representing, composing, selecting, and tuning scientific models
- Research funded by the Defense Advanced Research Projects Agency (DARPA)

Petri.jl
Software Development.

- A stochastic petri net modeling framework for the Julia programming language
- Allow petri nets to be compiled to Gillespie and differential equation based simulations

VirtualEnv.jl
Software Development.

- Self-contained virtual environments for the Julia programming language
- A reimplementation of `venv` from Python in Julia

Corsair Database

Georgia Tech Research Institute.

- Research funded by the Office of Naval Research (ONR)
- Developed a web application for viewing and analyzing sonar SAS data using Go, Python, and PostgresDB deployed with Docker and Drone.io
- Engineered a database for managing scientific experiments to utilize the speed and efficiency of using a rigid relational database, while being flexible enough to handle the changing data requirements of scientific experimentation
